PROFESSIONAL SUMMARY

Computer Science undergraduate (GPA: 8.7) with a strong, self-driven foundation in SOC operations, threat detection, and incident response. Built practical skills through structured **TryHackMe SOC Level 1** training and independent blue-team projects, including an AI-assisted alert triage pipeline with **MITRE ATT&CK**-mapped detections. Experienced in **SIEM** concepts, log analysis, network traffic investigation, and enrichment tools (**VirusTotal**, **AbuseIPDB**). Seeking a SOC Analyst internship to apply hands-on skills in a live security operations environment.

CORE COMPETENCIES & TECHNICAL SKILLS

SOC & Threat Hunting:	Log Analysis, Alert Triage, Incident Response, Threat Detection, SOAR Workflows, EDR Concepts
SIEM & Networking:	**Splunk** (SPL basics, dashboards), **Elastic Stack (ELK)**, **Wireshark** (filters & protocol analysis), TCP/IP, IDS/IPS concepts
Programming & OS:	**Python** (OOPs, File Handling, Scapy, APIs), Bash Scripting, **Kali Linux** (Primary), Windows
Frameworks & Theory:	**MITRE ATT&CK** Framework, Cyber Kill Chain, Vulnerability Management Fundamentals

PRACTICAL SECURITY PROJECTS

AI-Powered SOC Analyst Pipeline | Python, Streamlit, Gemini API, VirusTotal, AbuseIPDB

Personal Project | 2026

- Built an end-to-end **Python** pipeline that ingests and normalizes multi-format logs (JSON/JSONL, CSV, SSH auth logs), detects threats, and auto-generates structured Markdown incident reports.
- Implemented detections mapped to **MITRE ATT&CK** techniques: SSH brute force (T1110.001), port scanning (T1046), and DNS tunneling (T1071.004); correlated alerts by type and source IPs.
- Enriched alerts using **VirusTotal** and **AbuseIPDB** reputation APIs; added Gemini AI-assisted triage with rule-based fallback for consistent prioritization.
- Developed a Streamlit dashboard for real-time alert visualization, triage workflow, and report export — simulating a lightweight SOC analyst console.

Network Traffic Analysis | Wireshark

Personal Lab | 2026

- Captured and dissected live network traffic using **Wireshark** to map protocol behavior (TCP, UDP, DNS, HTTP/S) and identify anomalous patterns relevant to intrusion detection.
- Applied display filters and statistical analysis to flag suspicious activity such as unusual port usage, repeated failed connections, and potential reconnaissance traffic.

SIEM Learning Lab | TryHackMe

Hands-on Training | 2026

- Practiced end-to-end log monitoring, alert triage, and incident investigation in a simulated SOC environment.
- Applied **SIEM** correlation logic to differentiate genuine threats from false positives and document investigation findings following standard incident response workflows.

CERTIFICATIONS & TRAINING

Google Cybersecurity Professional Certificate — Coursera

Completed

Cybersecurity Trainee — TryHackMe

January 2026 – Present

- Actively pursuing **SOC Level 1 (SAL1)** path with focus on threat hunting, endpoint security, and alert investigation.
- Completed Cyber Security 101 and Pre Security paths covering networking fundamentals, attack methodologies, and SOC basics.
- Hands-on practice with **Wireshark**, **Nmap**, TCPDump, Linux, Windows, and network traffic analysis in lab environments.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science | GPA: 8.7

Bikaner Technical University (BTU), Rajasthan, India | August 2024 – September 2028
